3 easy steps installation guide

1) SEARCHLIGHT

- a) Un box searchlight template and place on mounting surface
- b) Drill required mounting holes and center 1" hole as shown in picture below for power and control wire

- c) Fasten searchlight in place using supplied waterproof gasket after running power to proper fuse and control wire to helm near the control box area

2) Place control box in position below helm area where joystick will be installed and connect control wire from searchlight

3) JOYSTICK ASSEMBLY

- a) Secure and screw in metal joystick template at desired location selected after checking available space below for penetration of wires

- b) Cut out center of template

- c) Insert joystick control wires into template opening and connect them to control box wires as indicated

- d) Screw down joystick

All finished
